ANNEX

Terms and Conditions

1. Terms and Conditions

1.1 Quality Specifications

AMB will only consider carrots that fully meet the Grade 1 specifications previously circulated.

Only suppliers who can guarantee compliance with these standards will be eligible.

Suppliers shall ensure that all produce supplied complies with applicable food safety requirements, including responsible use of agricultural inputs, traceability of production sources and appropriate post-harvest handling practices.

1.2 No Tolerance for Substandard Produce

Substandard produce will not be accepted under any circumstance.

AMB will not entertain any price negotiations for lower quality.

All purchases will be made strictly based on quality assessments carried out by AMB Stores Officers, in line with established specifications.

Acceptance or rejection of deliveries shall be determined solely on the basis of objective quality criteria and inspection procedures established by AMB.

Suppliers shall ensure that rejected consignments are removed promptly and shall bear all related costs associated with rejected produce.

1.3 No On-site Sorting at Moka

Sorting of produce will not be permitted at the AMB's Moka facility.

Any rejected consignments must be removed by the grower at their own cost, without delay.

1.4 Sample Submission Requirement

All interested growers must submit a minimum of two (2) bags of sample carrots to the Head Operations Officer for prior quality approval.

Samples must accurately reflect the quality of the produce intended for bulk supply.

The sample submission shall be representative of the production intended for delivery during the supply period. Approval of samples shall not exempt suppliers from quality inspection of individual consignments upon delivery.

AMB reserves the right to request additional samples or field verification where necessary.

1.5 Field Monitoring Information

A complete list of participating planters and detailed plot information must be submitted to AMB in advance to allow for proper field monitoring.

Suppliers shall provide information on expected production volumes, planting schedules and anticipated harvesting periods to support supply planning and monitoring.

1.6 Inclusive Participation Encouraged

AMB strongly encourages suppliers to engage the maximum number of local planters to promote inclusive agricultural development and ensure sufficient volumes.

Suppliers are encouraged to establish sourcing arrangements involving small and medium-sized local growers where feasible, while ensuring compliance with AMB quality and delivery requirements.

1.7 Technical Supervision and Support

AMB intends to formally request the support of FAREI for field supervision and technical assistance throughout the production cycle — from plantation to post-harvest — to ensure consistent quality standards.

A pre-selection exercise will be carried out and the selected firms shall be invited thereafter to participate in a bidding process.

Field monitoring and technical support activities shall not constitute a guarantee of acceptance of produce, which shall remain subject to AMB's quality inspection procedures.

2. Production Risk Management

Applicants are encouraged to provide information on measures adopted to mitigate production risks, including but not limited to:

availability of irrigation facilities;

pest and disease management measures;

measures to address adverse climatic conditions affecting production continuity.

3. Evaluation and Pre-selection Criteria

Submitted EOIs shall be assessed by AMB based on the following indicative criteria:

Criterion	Weight
Demonstrated carrot production/aggregation capacity	30%
Ability to comply with Grade 1 quality requirements	25%
Proposed production volume and delivery schedule	20%
Grower participation and inclusiveness	15%
Relevant experience in supplying institutional buyers	10%

AMB reserves the right to verify information submitted by applicants, including production capacity, grower participation and field details.
